

Molmic Timber Tables Range

Care & Maintenance

Refers to Elm, Eva and Star tables

The timber used in the Star table is FSC (Forest Stewardship Council) certified and sourced from controlled, responsibly managed forests.

The timber used in the Elm and Eva table is made from recycled and reclaimed timber from old houses. These timbers come naturally with cracks and uneven joins, adding character and uniqueness to each table.

These knots and joins form part of the appearance of the furniture and do not affect performance.

Changes in temperature and humidity can affect timber furniture which may expand and contract. Avoid exposing the furniture to excessive heat and moisture. Direct sunlight will cause timber colours to fade.

A minimum distance of 50cm from any heat source is recommended.

Avoid placing hot drinks directly onto timber surfaces—a coaster is recommended.

A damp cloth can be used to wipe surface spills—and remove any spills in a timely manner.

Do not use harsh chemicals to clean—a soft cloth and soft wax or suitable timber polish can be used to maintain lustre and appearance.
